ACCEPTABLE

GENERAL INFO

- ⇒ Solar collectors, panels and other solar equipment are not permitted in front yards. Rooftop solar equipment may be installed with approval of the ACC.
- ⇒ Rooftop solar equipment must lie flat on the roof and be placed so the top panel is parallel with the roof ridge. No part of the installation may be visible above the ridge line.
- ⇒ Where possible, rooftop solar equipment should be placed on a roof surface which faces away from the street on which the house front. Your illustration on the left follows these guidelines.

MORE INFO

- ⇒ Support brackets, collector frames, and exposed pipes must be painted in the same color as the adjacent surface.
- ⇒ Pipes wires and control devices must be concealed as much as practical and, where possible, piping should go through the roof rather than on the face of the roof or dwelling
- ⇒ Approval is required for solar equipment that is located on the side of a residence that is not visible from the street on which the residence fronts or if a corner lot, from the side street, since it is a change to your home.
